Excellent (5)
State management, including for game logic and player scores, is implemented efficiently using React hooks or class-based components.
Event handling, allowing smooth user interaction with game elements, is implemented accurately and seamlessly integrated with the gameplay.
Effective debugging techniques are employed to identify and resolve code issues, including those related to gameplay mechanics.
Game is successfully personalized and deployed, showcasing the unique gameplay features and providing an enjoyable gaming experience.

Good (3)
State management is mostly efficient but may have minor issues or redundancies.
Event handling is mostly accurate but may have minor glitches.
Debugging techniques are mostly effective but may have minor oversights.
Game personalization and deployment are mostly successful but may have minor issues.

Fair (2)	Poor (1)
State management has significant errors or inefficiencies.	State management is missing or not implemented for gameplay.
Event handling has errors or inconsistencies in functionality.	Event handling is missing or not integrated properly.
Debugging techniques are attempted but lack effectiveness or thoroughness.	Debugging techniques are not applied or ineffective.
Game personalization or deployment has errors or inconsistencies.	Game personalization or deployment is incomplete or not executed.
